

H&T Presspart announces partnership with BIOCORP for the Inspair™ digital technology

16th December 2021

H&T Presspart (a division of the German based Heitkamp & Thumann Group), announces today that a new partnership deal has been signed with BIOCORP, a French based company specialised in the development and manufacture of medical devices and connected healthcare solutions, whereby H&T Presspart is licensed to sell and promote BIOCORP's Inspair™ smart add-on device for metered-dose inhalers.

The partnership covers the integration and commercialisation of Inspair™, a smart sensor designed by BIOCORP that transforms inhalers into connected devices to help patients suffering from asthma or chronic obstructive pulmonary disease (COPD) in the delivery of their treatment.

The partnership with BIOCORP will allow H&T Presspart, the market leader in respiratory drug delivery devices, to expand its product portfolio in the field of digital healthcare solutions beyond its existing embedded eMDI™ platform with an add-on device that will improve patient adherence and will help patients to manage their conditions more effectively.

Christian Kraetzig, President of H&T Presspart commented "This strategic partnership underlines our commitment to forging alliances that accelerate the development, global scale-up and commercialisation of novel drug delivery solutions for patients,"

Eric Dessertenne, CEO of BIOCORP added: "We are very proud to entrust the distribution of Inspair™ to H&T Presspart, one of the world leaders in the respiratory disease market. This new major agreement further positions BIOCORP as a provider of connected health solutions. After our success with Mallya™, BIOCORP now has a second solution with very high potential both in terms of business and the number of possible applications with Inspair™".

Inspair™ provides an innovative and effective response to the needs of these two diseases: It directly affects compliance with treatment and strengthens the link between the patient and the medical staff by providing real-time therapeutic monitoring. Inspair™ records daily inhalation data, monitors proper aerosol preparation (which must be shaken before use), assesses inhalation timing (hand-to-mouth coordination) and provides useful insights into the various stages of inhalation.

About H&T Presspart

H&T Presspart is a market leader in the design and manufacture of respiratory drug delivery systems, with 50 years' experience and a worldwide reputation for competence, quality and innovation in the pharmaceutical market. H&T Presspart's New Product Development Center (NPDC) & Inhalation Product Technology Centre (IPTC) support new product developments and strategic initiatives with our customers. H&T Presspart has 4 European manufacturing sites with additional sales offices in China, India, the U.S.A. and Uruguay. For more information, please visit www.presspart.com.

About BICORP

Recognized for its expertise in the development and manufacture of medical devices and delivery systems, BIOCORP has today acquired a leading position in the connected medical device market thanks to Mallya. This smart sensor for insulin injection pens allows reliable monitoring of injected doses and thus offers better compliance in the treatment of patients with diabetes. Available for sale from 2020, Mallya spearheads BIOCORP's product portfolio of innovative connected solutions. The company has 70 employees. BIOCORP is listed on Euronext since July 2015 (FR0012788065 – ALCOR). For more information, please visit www.biocorpsys.com.
